

Project Documentation format

Milestone 1: Service Catalog Configuration

Activity 1: Create the Network Request Catalog Item

- Navigated to **Service Catalog > Catalog Definitions > Maintain Items** in ServiceNow.
- Created a new catalog item named **Network Request**.
- Configured the basic details, including the item name and short description.
- Assigned the catalog item to the appropriate service catalog.
- Saved the catalog item to make it available for further configuration.
- Verified that the catalog item was successfully created and ready for adding variables and workflow automation.

The screenshot shows the 'Catalog Item' configuration page for 'Network Request' in ServiceNow. The page has a top navigation bar with a back arrow, a hamburger menu, the title 'Catalog Item Network Request', and action buttons: 'Copy', 'Try It', 'Update', 'Edit in Catalog Builder' (highlighted in blue), and 'Delete'. Below the navigation bar is a blue informational box stating: 'Catalog items are goods or services available to order from the service catalog. Items can be anything from hardware, like tablets and phones, to software applications, to furniture and office supplies.' followed by two bullet points: 'Enter a Name and Short description to display for the item.' and 'Enter a Price, approvals, variables, and other information as needed.'

The main configuration area contains the following fields and controls:

- Name:** A text input field containing 'Network Request'.
- Application:** A dropdown menu set to 'Global'.
- Catalogs:** A button with a lock icon and the text 'Service Catalog'.
- Category:** A dropdown menu set to 'Network'.
- State:** A dropdown menu set to '-- None --'.
- Checked out:** A dropdown menu set to '-- None --'.
- Owner:** A text input field containing 'System Administrator'.
- Secondary owners:** A button with a lock icon.
- Active:** A checkbox that is checked.
- Fulfillment automation level:** A dropdown menu set to 'Unspecified'.

Below the main configuration area is a tabbed interface with four tabs: 'Item Details' (selected), 'Process Engine', 'Picture', and 'Pricing'. The 'Item Details' tab shows a 'Short description' field containing 'Network request Management' and a 'Description' field with a rich text editor toolbar. The toolbar includes buttons for bold (B), italic (I), underline (U), undo, redo, text color, background color, link, and unlink, along with a font family dropdown set to 'Verdana' and a font size dropdown set to '8pt'.

Activity 2: Define the Request Categories

- Assigned the **Network Request** catalog item to the appropriate service category.
- Organized the catalog for easy navigation in the Service Portal.
- Verified that the catalog item appeared under the selected category.

Category Network

* Title: Network

Application: Global

Catalog: Service Catalog

Location:

Description:

Active: ☒

Parent:

Header icon: [Click to add...](#)

Icon: [Click to add...](#)

Update Delete

Activity 3: Configure the Catalog Description and Accessibility

- Added a clear **short description** explaining the purpose of the Network Request catalog item.
- Configured the catalog item to be accessible through the Service Portal.
- Verified that users could view and access the catalog item.
- Saved the configuration.

Activity 4: Verify the Catalog Item in the Service Portal

- Opened the **Service Portal** to verify the **Network Request** catalog item.
- Confirmed that the catalog item was displayed correctly under the assigned category.
- Verified that users could access and open the request form successfully.

Activity 5: Prepare the Catalog Item for Variable Configuration

- Verified that the catalog item was successfully configured.
- Ensured the catalog item was ready for adding variables and variable sets.
- Completed the initial catalog setup for the next development phase.

Categories View: Item Updated Search								
All								
☐	Title	Description	Catalog	Active	Roles	Location	Parent	Updated

Milestone 2: Variables Configuration

Activity 1: Create Choice Variables

- Created the Connection Type choice variable with options New, Relocation, and None.
- Created the Device Type choice variable with options Laptop, Mobile, and Others.
- Configured the choice values to ensure standardized user input.
- Verified that both variables were displayed correctly in the catalog item.

Activity 2: Create Input Variables

- Created input variables to collect requester and network request details.
- Configured variables such as Address, Relocation Address, Device Details, Additional Information, User Name, Email ID, Phone Number, Opened on behalf of, and Proof of Document.
- Assigned the appropriate variable types (String, Reference, and Attachment) based on the required input.

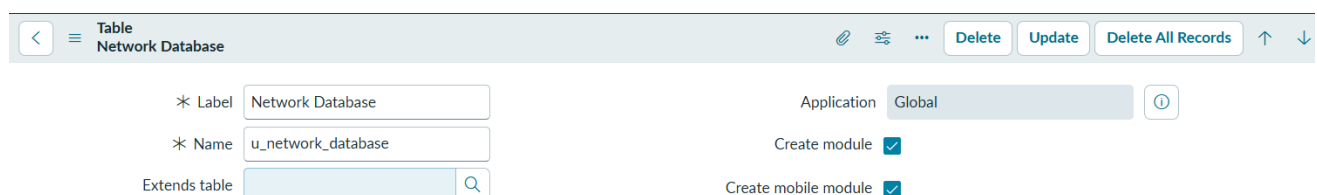

The screenshot shows the 'Catalog Item Network Request' interface. At the top, there are tabs for 'Variables (10)', 'Variable Sets (1)', 'Catalog UI Policies', 'Catalog Client Scripts (1)', 'Available For', 'Not Available For', 'Categories (1)', 'Catalogs (1)', and 'Catalog Data Lookup Definitions'. Below these tabs, there is a search bar and a table of variables. The table has columns for 'Type', 'Read only', 'Question', 'Order', 'Mandatory', and 'Created'. The variables are listed in descending order of their 'Order' value.

Type	Read only	Question	Order	Mandatory	Created
Single Line Text	false	If any please write here	510	false	2026-07-30 04:47:07
Container Start	false	Additional information	500	false	2026-07-30 04:46:43

Activity 3: Verify the Variables in the Catalog Item and create Table

- Verified that all configured variables were displayed correctly in the **Network Request** catalog item.
- Checked the variable order, labels, and input types for accuracy.
- Confirmed that the form was ready for implementing UI policies and workflow automation.
- Create Network Database table as well

The screenshot shows the 'Table Network Database' configuration form. It includes fields for 'Label' (Network Database), 'Name' (u_network_database), and 'Extends table' (empty). There are also checkboxes for 'Create module' and 'Create mobile module', both of which are checked. The 'Application' is set to 'Global'.

Field	Value
Label	Network Database
Name	u_network_database
Extends table	
Create module	☒
Create mobile module	☒
Application	Global

Table Network Database						
Table Columns for text Search

×	Request Number	String	(empty)	40		false
+	Insert a new row...					

Milestone 3: Form Automation and Workflow Development

Activity 1: Configure UI Policy and Client Script

- Created a UI Policy to display the Relocation Address field only when Relocation is selected.
- Configured a Client Script to auto-populate the User Name, Email ID, and Phone Number based on the Opened on behalf of field.
- Verified the dynamic behavior of the form during request submission.

<

≡

Catalog UI Policy
New record

?

...

Submit

Catalog UI policies are similar to standard UI policies. Catalog UI policies dynamically change variables that are part of a catalog item or change how variable sets are handled. Policies can also be applied when the variables are present in a Requested Item or Catalog Task form. [More Info](#)

6   g_form.clearValue('phone_number');
7 }
8 var ga = new GlideAjax('GetUserDetails');
9 ga.addParam('sysparm_name', 'getDetails');
10 ga.addParam('sysparm_user', newValue);
11 ga.getXMLAnswer(function(response) {
12   if (response) {
13     var user = JSON.parse(response);
14     g_form.setValue('email_id', user.email);
15     g_form.setValue('user_name', user.name);
16     g_form.setValue('phone_number', user.phone);
17   }
18 });
19 
```

Activity 2: Develop the Flow Designer Workflow

- Created the **Network Request Approval Flow** using **Flow Designer**.
- Configured the workflow to retrieve catalog variables, create records, and automate the approval process.
- Added decision logic to handle both approval and rejection scenarios.

Activity 3: Verify Workflow Execution and Record Creation

- Executed the workflow by submitting a sample **Network Request**.
- Verified the approval flow and record creation in the **u_network_database** table.
- Confirmed that the workflow executed according to the configured logic.

Milestone 4: Testing and Validation

Objective: Verify that the complete network request workflow functions correctly.

Activities

- Activity 1: Test the Catalog Item and Form Submission.
- Activity 2: Validate the Workflow Execution.
- Activity 3: Verify Data Accuracy and Resolve Issues.

Conclusion:-

- Successfully developed an automated **Network Request Approval System** using the ServiceNow platform.
- Implemented the Service Catalog, variables, UI Policy, Client Script, and Flow Designer workflow.
- Automated the request approval process, email notifications, and record creation in the **u_network_database** table.
- Improved the efficiency of handling network requests by reducing manual effort and ensuring a standardized approval process.
- Validated the overall functionality through testing and documented the implementation for future enhancements.
