

Project Design Phase

Problem – Solution Fit Template

Date	31 July 2026
Name	D. Venkata Charan Teja
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	2 Marks

Problem – Solution Fit Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) - Employees requesting network resources - IT Help Desk Staff - Network Administrators - System Administrators (Approvers) - Infrastructure & Network Teams - Corporate IT Department Users who need to request, approve and manage network resource requests.	6. CUSTOMER CONSTRAINTS - Limited IT resources - Manual approval dependency - Incomplete request details - Approval delays - Data entry mistakes - Lack of centralized database - Communication gaps Challenges and limitations customers face in current manual process.	5. AVAILABLE SOLUTIONS - Email-based request and approval - Excel spreadsheets - Manual ticket tracking - Phone communication - Paper request forms - Basic ITSM ticket systems Limitations: - Human errors, slow process, no automation - Poor visibility and reporting	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS - Submit network resource requests quickly - Avoid manual paperwork and email approvals - Track request status in real time - Ensure accurate request information - Reduce provisioning delays - Automate approval workflow - Store approved requests automatically Tasks customers want to complete and problems they face in current process.	9. PROBLEM ROOT CAUSE - Manual request handling - Email-based approvals - No standardized request form - Manual data entry - Lack of workflow automation - No centralized request database - Delayed communication between users and administrators Underlying reasons why the problems exist.	7. BEHAVIOUR Current Behaviour: - Send email requests - Wait for administrator response - Frequently follow up for updates - Contact IT through calls/messages - Re-submit forgotten requests - Maintain separate records manually Desired Behaviour: - Submit requests through Service Catalog - Track progress online - Receive automatic notifications - Trust automated workflows	Focus on J&P, tap into BE, understand RC
Identify strong TR & EM	3. TRIGGERS - Employee needs a new network connection - New device installation - Office relocation - Department expansion - Hardware replacement - Existing network issue - Requirement for additional network access	10. YOUR SOLUTION Develop a ServiceNow-based Network Resource Request Automation System that: - Uses Service Catalog for request submission - Collects: device_type, connection_type, address, user_name - Automatically triggers Flow Designer - Sends assignment notification to System Administrator - Requests approval from System Administrator - If approved → Inserts data into u_network_database and sends Approval Email (Emerald Green) - If rejected → Sends Rejection Email (Crimson Red) - Provides automated, centralized and traceable request management	8. CHANNELS OF BEHAVIOUR 8.1 ONLINE - ServiceNow Service Portal - Corporate Intranet - Email Notifications - Service Catalog - Self-Service Portal 8.2 OFFLINE - IT Help Desk - Phone Support - Network Administration Office - Internal Meetings	Explore online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER Before - Frustration due to manual approvals - Long waiting periods - Uncertainty about request status - Duplicate submissions - Communication delays After - Faster approvals - Transparent tracking - Increased confidence - Reduced workload - Better user satisfaction			

The **Problem–Solution Fit Canvas** validates that the proposed ServiceNow solution effectively addresses the challenges of manual network resource request management.

- **Customer Segments:** Employees, IT Help Desk, Network Administrators, and System Administrators who submit, manage, and approve requests.
- **Jobs-to-be-Done:** Enable quick request submission, real-time tracking, and automated approvals.
- **Triggers:** New device installations, office relocation, hardware replacement, and additional network access requests.

- **Emotions:** Manual processes cause delays and frustration, while automation improves transparency, speed, and user satisfaction.
- **Available Solutions:** Existing email and spreadsheet-based methods are slow, error-prone, and difficult to track.
- **Customer Constraints:** Manual approvals, communication delays, and lack of centralized request management.
- **Behaviour:** Users currently rely on emails and follow-ups; the proposed system encourages self-service through the ServiceNow portal.
- **Channels:** ServiceNow Service Portal, email notifications, corporate intranet, and IT Help Desk.
- **Problem Root Cause:** Manual workflows, decentralized data, and absence of automation.
- **Solution:** A ServiceNow workflow automates request submission, approval, database updates (u_network_database), and approval/rejection email notifications, improving efficiency and reducing processing time.
